

Towards a Unifying Framework for Whole-body and Manipulation Control

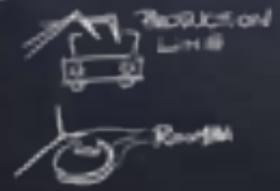

- 1) DO THINGS we DON'T want to Do
- 2) PLACES we CAN'T GO
- 3) VERY PRECISE

HOW?

Francesco Nori
Robotics, Brain and Cognitive Sciences

I call "He", not "it"

B) LEARN from MISTAKES

Towards a Unifying Framework for Whole-body and Manipulation Control

(B) LEARN
from
MISTAKE

WHY

3/32

WHAT

9/14

WHAT

11/32

Self

$$M(q)\dot{v}_q + C(q, v_q)v_q + g(q) = \begin{bmatrix} 0 \\ \tau_q \end{bmatrix} + J^T(q)f$$

Other

$$M(q)\dot{v}_q + C(q, v_q)v_q + g(q) = \begin{bmatrix} 0 \\ \tau_q \end{bmatrix} + J^T(q)f$$

Contact

$$\begin{bmatrix} J(q) & J(q) \end{bmatrix} \begin{bmatrix} \dot{v}_q \\ \dot{v}_q \end{bmatrix} + \dot{J}(q, v_q) + \dot{J}(q, v_q) = 0$$

HOW

13/14

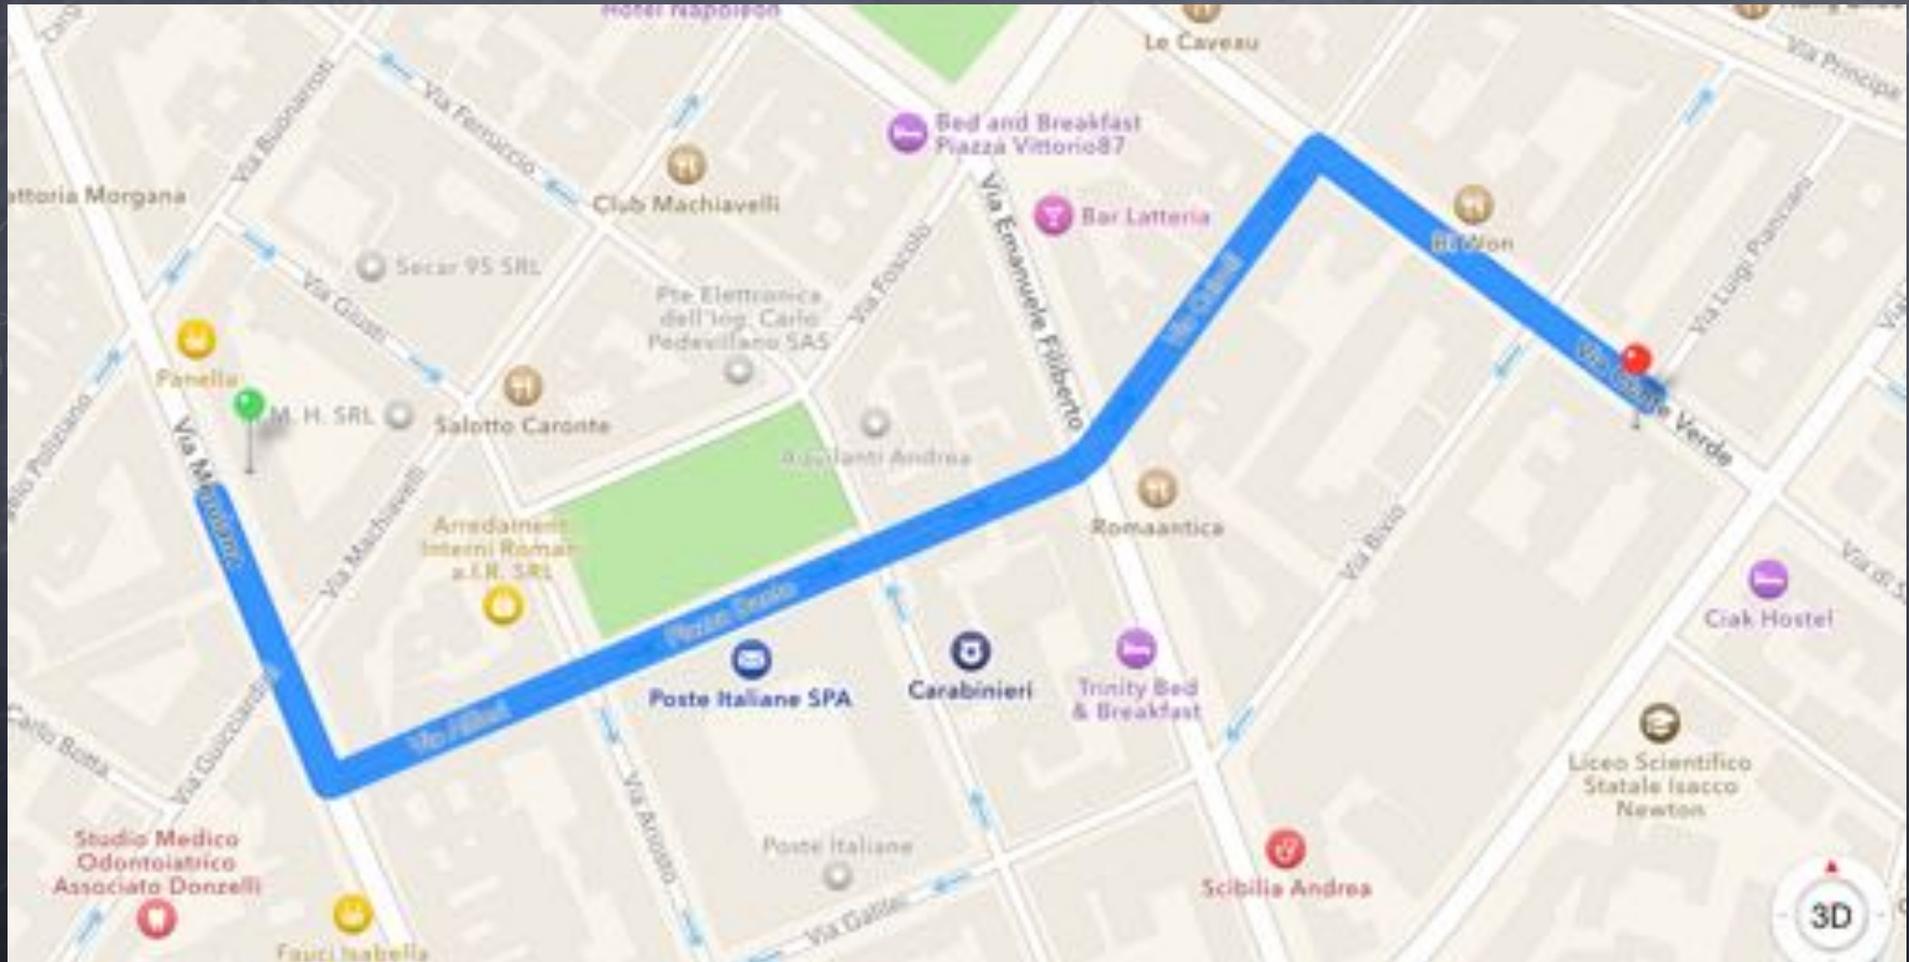

Workshop open questions

14/14

- Should we find a level of abstraction such that manipulation and whole-body motion control can be treated as unique problem?
- Hand motion synergies have been found in humans and have been proven to be useful in the design of robotic hands. Can we apply a similar principle in whole-body motion control?
- Several stability principles and contact models have been defined in both manipulation and whole-body motion. Do the peculiar differences in the two control tasks justify the necessity of different models?

Ristorante Da Nino

Via Merulana, 74, 00185 Rome, Italy

08:45-09:00 F. Nori - IIT

09:00-09:30 A. Del Prete - LAAS, CNRS

09:30-10:00 K. Hauser - Duke University

10:30-11:00 M. Ciocarlie - Columbia University

11:00-11:30 S. Kim - MIT

11:30-12:00 A. Bicchi - University of Pisa, IIT

14:30-15:00 S. Shaal - USC, Max-Planck-Institute
